General Notes on Materials used for PVC and CPVC Fittings and Dampers

For PVC fittings: Elbows, couplings, reducers, saddles, and branches are fabricated from seamless extruded duct except that the coupled ends on 24" sizes or a 24" coupling are fabricated from 3/16" PVC Type I sheet.

End caps are fabricated from seamless extruded duct and PVC Type I sheet

For CPVC fittings: Elbows, couplings, reducers, saddles, and branches are fabricated from seamless extruded duct except that the coupled ends on 24" sizes or a 24" coupling are fabricated from 3/16" CPVC sheet.

End caps are fabricated from seamless extruded duct and CPVC sheet.

For PVC dampers: All are fabricated using both PVC duct and Type I sheet

For CPVC dampers: All are fabricated using both CPVC duct and sheet

Please call with any questions you have about materials used or construction methods employed.

Material Specification Data Sheets can be found on then IPF Manuals and Downloads Page
